

CretePRO® Ultra

The Pro's Choice for Cost Effective Protection

CretePRO® Waterproofing Systems

Using these sub-surface, gel-forming waterproofing systems gives owners the best protection that is affordable. CretePRO® was designed by owners for owners to spray apply this subsurface barrier for protection on any concrete surface.

These cost-effective Waterproofing Systems provide owners with the absolute best sustainable products available in the marketplace today. Give us a try!

ALCHEMCO

Alchemco products are changing the market's perception of what 'long-term' waterproofing protection means. Why build structures with a design life of 50-100 years then protect them with products that are designed to only perform for 5-10 years?

CretePRO® ULTRA

CretePRO® Ultra is a bio-based waterproofing material that employs a sodium silicate waterproofing agent, that is enzymatically modified to chemically bond with concrete. With the introduction of water, the waterproofing agent increases in mass and forms a gel that encapsulates water trying to enter the concrete. This vapor permeable gel fills cracks, pores, and voids in the concrete, creating a long-term barrier to water infiltration.

CretePRO® The Pro's Choice

Water is concrete's #1 enemy for destruction, The modified sodium silicate penetrates into and bonds with the concrete to create a barrier to water, stopping the water from within the concrete rather than on the surface!

**No Certification
Necessary**

NSF 61 Certified

Affordable

PERFORMANCE

1

Waterproofing Simplified

Fast & Easy application time designed for owners without having to undergo timely and costly upkeep and maintenance. This spray applied subsurface barrier does not change the appearance of your concrete structure.

2

Application

When CretePro ULTRA Waterproofing Agent is being applied to newly poured concrete, then the application must not begin for at least 14 days after the pour is completed. If the system is being applied to older existing concrete then the application can begin once the surface is clean and all cracks have been properly cleaned & prepared.

3

Trafficable in under 4 hours

CretePRO® ULTRA is 100% trafficable within 4 hours after completed and dry, with minimal risk of damage during construction.

CretePRO®

Ultra

This versatile waterproofing technology has been protecting concrete structures around the world for over four decades. Structures such as: **parking ramps, highway bridges, stadiums, airports, hospitals, universities, high-rises, wastewater treatment plants & marinas.** The combination of rapid application rates, affordable up-front costs, and outstanding life-cycle costing makes this a waterproofing solution that highway departments can't pass up.

This award-winning concrete waterproofing technology helps increase the durability & sustainability of new and existing concrete slabs. Because it forms a layer of protective gel below the surface (inside the concrete), this waterproofing system cannot be damaged or deteriorate. The result is the concrete now has long-term protection from weather & harmful chemicals. The fast & easy application (horizontal or vertical surfaces) means owners can afford to protect their entire concrete structure without having maintenance for years to come!

CretePRO®

WATERPROOFING SYSTEMS

Provide the finest protection available for your concrete. These environmentally friendly products can substantially extend the service life of your concrete, protecting from deterioration for decades not years.

- Fast & Easy Application
- Professional Grade Waterproofing, affordable costs
- Waterproofing gel seals both existing & future cracks
- Vapor Permeable - Moisture won't get trapped!
- Eco-Friendly!
